Professional Summary

Results-driven Electrical, Electronics, and Instrumentation professional with more than 25 years of experience maintaining, troubleshooting, and optimizing mission-critical industrial control systems in power generation, manufacturing, and military environments. Extensive hands-on expertise with PLCs (Allen-Bradley), VFDs, instrumentation, SCADA-related systems, and complex electrical/pneumatic/hydraulic equipment. Proven leader in safety culture as chairman of a plant-wide employee-led safety team from 2019-2022. Currently pursuing a B.S. in Computer Information Systems with a concentration in Networking and Cybersecurity at Northwestern State University. Seeking to apply deep operational technology (OT) experience and emerging cybersecurity knowledge to roles in OT/ICS security, SCADA systems analysis, reliability engineering, or critical infrastructure protection.

Core Competencies

Operational Technology & Industrial Control Systems

- PLC Programming & Troubleshooting (Allen-Bradley PLC-5, SLC 500, Logix5000)
- DCS, HMI, and SCADA-related Systems (ABB, GE, and Rockwell Software logic programs)
- VFDs, Instrumentation, Transmitters, Controllers & Signal Processing
- Industrial Networking, Communications, I/O Systems & Control Loops
- HART & Smart Device Communication
- Electrical, Pneumatic & Hydraulic Systems Maintenance and Troubleshooting
- P&ID & Electrical Schematic Interpretation
- Quality Control Systems (Experion MX, DaVinci) and Robotics Programming

Cybersecurity & Networking Foundations

- Building expertise in Networking and Cybersecurity through B.S. in Computer Information Systems (Networking & Cybersecurity concentration)
- Understanding of secure design principles for OT/ICS environments
- Industrial communications, remote access considerations, and control system security awareness

Safety, Compliance & Leadership

- Safety Culture & Program Improvement (Plant-wide Employee-Led Safety Team Chairman, 2019-2022)
- Lockout/Tagout, Confined Space Entry, Hot Work Permits & Electrical Safety
- Regulatory Compliance (EPA emissions monitoring, OSHA standards)
- Work Management Systems (SAP, Maximo, Empac)

Technical Tools & Software

- Microsoft Office Suite (Advanced)
- Industrial Test & Diagnostic Equipment (Multimeters, Oscilloscopes, Process Meters, Insulation Testers)
- Computer Hardware, Software & Network Troubleshooting

Professional Skills

- Complex Troubleshooting & Root Cause Analysis
- Informal Team Leadership on Maintenance & Troubleshooting Projects
- Documentation, Reporting & Work Order Management
- Continuous Learning & Cross-Functional Collaboration
- Proficient in Microsoft PowerPoint – creating and delivering professional presentations and training materials

Education

Bachelor of Science in Computer Information Systems

School of Business | College of Business and Technology

Northwestern State University, Natchitoches, LA

Concentration: Networking and Cybersecurity

Currently Enrolled – Strong Academic Performance (GPA > 3.0)

Relevant Coursework: Web Page Development, College Algebra, Oral Communication, English Composition, and foundational courses supporting networking and cybersecurity studies.

Cybersecurity Research Project (NSU-NRMC Grant/Scholarship)

Conducted comprehensive research on cybersecurity threats facing medical facilities.

Authored the full research paper examining phishing, ransomware, malware, supply chain attacks, and exploited vulnerabilities, with analysis of real Louisiana incidents and practical mitigation strategies. Led project coordination, presentation development, and group deliverables for the 2025-2026 NSU-Natchitoches Regional Medical Center (NRMC) cybersecurity grant program.

Technical Diplomas

Louisiana Technical College, West Monroe, LA (2011)

- Industrial Instrumentation Technology
- Industrial Electronics Technology

Additional Relevant Coursework

University of the People (Non-degree seeking, 2025)

- Introduction to Computer Science (A)
- Online Education Strategies (A)

Professional Training

U.S. Navy – Naval Training Center, San Diego, CA (2003)

Advanced Electronics Training – Active/Passive Sonar Equipment Troubleshooting

Professional Experience

Power Plant E&I Technician, Senior

Cleco – Brame Energy Center, Lena, LA

October 2015 – Present

- Perform preventive, corrective, and routine electrical, mechanical, and instrumentation maintenance on mission-critical power generation systems to ensure reliable plant operations.
- Troubleshoot and maintain HMI, DCS, and SCADA-related control systems, including Rockwell Software, ABB and GE logic programs, VFDs, controllers, transmitters, and signal processing equipment.
- Diagnose and repair issues with industrial communications, I/O systems, drives, and networked control devices using electrical schematics, P&IDs, and diagnostic tools.
- Lead small teams during complex troubleshooting and maintenance projects, coordinating efforts to minimize downtime and restore systems efficiently.
- Support plant-wide safety culture through implementation of improved Job Safety Briefing (JSB) processes and development of training materials, including a rescue ladder training video for fall protection incidents.
- Utilize work management systems (SAP, Maximo, Empac) to document maintenance activities, generate work orders, and track equipment history.
- Maintain strict compliance with electrical safety standards, lockout/tagout procedures, confined space entry, hot work permits, and EPA emissions monitoring requirements.

Field Service Specialist – QCS

Honeywell, Baton Rouge, LA

November 2014 – July 2015

- Performed preventive and corrective maintenance on paper machine quality control systems (QCS), including nuclear basis weight sensors, caliper thickness sensors, and color sensors.
- Maintenance and troubleshooting on re-wet spray systems, re-dry headbox steam systems, WebVision sheet break detection systems, and Cognex/SmartView hole detection systems.

- Utilized various electrical signal testing equipment to diagnose and resolve issues on industrial scanning and control systems.
- Focused on maximizing production quality and minimizing downtime through precise calibration and timely repairs of critical process control equipment.

Electrician A

Boise Cascade, Florien, LA

November 2011 – November 2014

- Maintenance and troubleshooting on electrical and electronic industrial equipment to maximize production uptime.
- Installed, maintained and performed corrective and planned maintenance on electrical, electronic, pneumatic, hydraulic, and automation systems using multimeters, oscilloscopes, process meters, and automation software.
- Worked with PLCs and control systems in a fast-paced manufacturing environment on rotating shifts.

Sonar Technician (Advanced Electronics Training)

U.S. Navy – USS Nicholas FFG-47, Norfolk, VA

April 2002 – April 2008

- Performed routine and corrective maintenance, testing, and troubleshooting on underwater acoustic electronic systems and tactical weapons firing equipment.
- Maintained air and water pressure systems, piping, valves, and cooling systems supporting sonar operations.
- Supervised teams of up to 15 personnel during maintenance and operational evolutions.
- Completed Advanced Electronics Training and served honorably as an E-5 with Enlisted Surface Warfare Specialist (ESWS) qualification. Conducted multiple extended deployments supporting mission-critical operations.

Electrician Apprentice

Twin City Electric Co., West Monroe, LA

September 2015 – October 2015

- Participated in the National Electrical Contractors Association (IBEW) Electrician Apprenticeship Program, performing commercial and residential electrical installation and construction work.

Equipment Operator / General Labor

Turner Brothers Farm, Bastrop, LA

April 1992 – April 2002; April 2008 – November 2011; July 2015 – September 2015

- Operated farm equipment and performed general labor supporting agricultural operations.
